

## ***U.S. PATENT FOR CANADIAN ENERGY SAVER***

31 October 2003.  
Toronto, Canada

*Art K. Tateishi*, 85 years, inventor and founder of *Seabreeze Electric Corporation*, was recently awarded US patent # 6,624,397 B2 for his most recent creation: the “*Thermaflo*”™ electrical circuit which combines dramatic energy savings with improved performance in portable electric heaters.

“We have overcome the consumer concerns of excess noise and cooler air output at low wattages which have characterized portable electric heaters...our “*Thermaflo*”™ heaters synchronize the ideal fan speed to the selected wattage, producing whisper quiet operation, more intense heat, and energy savings”, explained *Tateishi*.

*Tateishi* added, “We are excited by the recognition the patent office afforded my invention. We are confident that this technology will revolutionize the home comfort industry”.

This patented “*Thermaflo*”™ technology was first introduced to the North American market in 2002. The innovation was quickly incorporated into the patented heater designs which Seabreeze manufactures in its Toronto, Canada factory and ship around the world.

The Company’s fully integrated manufacturing capability allows for production of all its motors, heating elements, metal stampings, injection moulding and final assembly in-house.”

Design and production under one roof, close to major North American markets, permits rapid introduction of innovative technology.

“Better than ever, we’re spreading a curtain of comfort with our pulse action “*Heat Sweep*”™ and outlet mountable “*Off the Wall*”™ designs equipped with “*Thermaflo*” technology”.
